Letter from Paul H. Lord

Hit and run at 5 Mile Point

The severely damaged buoy was recovered from the bottom of the lake.

I received a report on Monday morning that someone had observed “a pontoon boat run over the 5 Mile Point no wake buoy” which subsequently “sunk!”

On Friday morning, we assembled a team of two faculty members and three students and investigated the 5-mile Point buoy location (which is 105’ deep; a challenging dive).

I found the buoy on the bottom, attached a lift bag and brought it up to within 20’ of the surface where, upon inspection, we found what is depicted in the attached photo. We have never seen such damage to one of our buoys from a single impact.

The pontoon boat driver was obviously ignoring the no-wake zone requirement and failed to report (to my knowledge) the accident which cost between \$700 and \$900 to repair (depending on whether items lost and destroyed in the recovery are included). Those costs, of course, do not include the time invested by the five of us doing the recovery and replacement work and includes no charge for the boat use. We swapped out the buoy. The destroyed buoy retrieved from the bottom of Otsego Lake is now at the SUNY Oneonta Biological Field Station Boathouse (7016 State Highway 80), at the water’s edge, for anyone who might want to inspect it.

Our lake is for our enjoyment. All of us who love the lake need to keep it safe for others. If anyone has any information regarding this incident, either witnessing it or notice a pontoon boat with a damaged bow, I ask that you call the Sheriff’s Office at 607-547-1690.
